# TASK 3

## CREATE A SERVERLESS FUNCTION (AWS LAMBDA / CLOUD FUNCTION)

Goal :

Create a simple serverless function that returns JSON output.

Requirements :

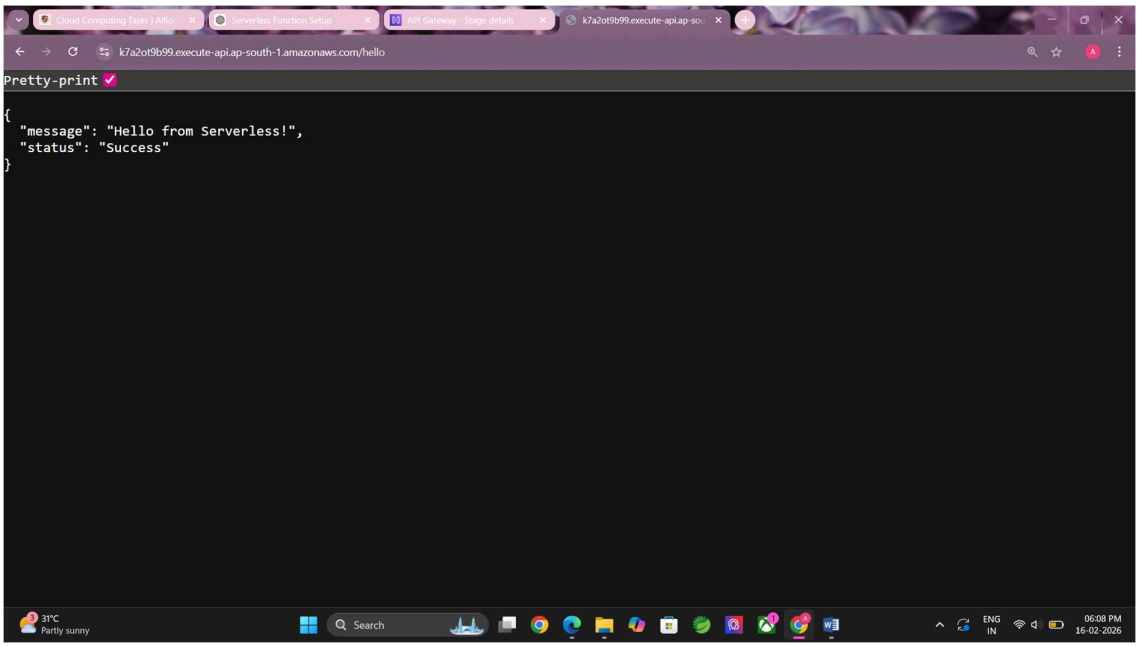
- Create function using Node.js / Python
- Test function using cloud console
- Deploy + generate public endpoint (API Gateway)

Deliverables :

1. Endpoint URL returning JSON
2. Code of function

### 1. Endpoint URL returning JSON :

https://k7a2ot9b99.execute-api.ap-south-1.amazonaws.com/hello



**2 . Code of function :**

```
export const handler = async (event) => {
    return {
        statusCode: 200,
        headers: {
            "Content-Type": "application/json"
        },
        body: JSON.stringify({
            message: "Hello from Serverless!",
            status: "Success"
        })
    };
};
```
